THE EFFECT OF THE MATURITY INDEX ON THE STRUCTURE OF THE SOLUTIONS AND THE FORMATION PROCESS OF THE FIBER. [1960] [10]p. 7 refs.
Order from LC or SLA m\$1.80, ph\$1.80 61-16235

Trans. of Khimicheskiy Volokna (USSR) 1959, no. 2,
p. 44-47.

The susceptibility of the fiber to oriented stretching increases with a rise in the maturity index of viscose solutions, while the strength and elongation of the fiber improve. The viscosity drops considerably with a rise in the temperature of viscose solutions, the density of packing of the freshly-formed fiber diminishes, and the susceptibility of the fiber to oriented stretching rises with a simultaneous decline in reversible deformation, which facilitates obtaining fibers of greater strength.
